

White Nile dredging equipment

backhoe dredge 'Khartoum'
during trial run

Workboat during river trails

Earlier and successful projects carried out by DEMAS in the fields of dredging, weed clearance and siltation control in The Sudan, led to a further invitation from the Ministry of Irrigation to analyse, with financial help from the World Bank, the dredging needs in the canals feeding the forty irrigation water pumping stations along the White Nile and to propose the most appropriate equipment for carrying out the work.

Once it had been decided to purchase the proposed equipment, DEMAS prepared the specifications for the tender, evaluated the offers and supervised the construction of a floating backhoe dredger, a workboat and a survey launch in The Netherlands.

The equipment was then transported to The Sudan, assembled and put into service there under DEMAS supervision.

Client

Ministry of Irrigation

Location

The Sudan
The Netherlands

Year

1986 - 1988

Services

- tender preparation
- equipment procurement
- project assistance
