

Training Algerian officers on operation of CSD with X-mas tree and booster

DEMAS prepared and lectured several tailor made training courses for different clients covering their needs regarding dredging and its operation. Based on this experience DEMAS has developed a course programme with a number of modules, which can be given as independent lectures. The manuals of these modules are a general guidance for the interactive lectures given in the classroom.

The following modules are selected in cooperation with DAMEN Shipyards for 2 courses for the Algerian Officers. The officers work on a cutter suction dredge equipped with a X-mas tree configuration. They may have to work with a booster pump station when a long discharge distance is required.

- Dredging techniques and constraints
- Transport by pipeline
- Pump
- Pump and Pipe Interaction
- Soil
- Work Method CSD on X-mas tree
- Survey
- Reporting

The modules are as general in nature as possible, but will where possible highlight the specific dredge type, site conditions and working conditions met in the field by the trainees.

Client

DAMEN Shipyards N.V.

Location

The Netherlands, Gorinchem

Year

2003 and 2004

Services

- dredge crew training
