

Penny's Bay Reclamation, design and construction

DEMAs involvement in the project started in 1995, when the area was earmarked for the construction of two container terminals. As a specialist dredging adviser to Maunsell Consultants DEMAs provided advice on the dredging, the placement of sand on soft silt and clay layers and the general fill with sand for the Detailed Design Study for the Container Terminals 10 & 11 of Hong Kong

After a change in the scope of development for the area to create a Theme Park DEMAs was sub-consultant providing specialist dredging and reclamation advice to Scott Wilson. It started with advice in the study and continued during the tender and the execution phases of Penny's Bay reclamation project for the new Disney Park.

The services included the assessment of dredging techniques, planning and costing plus advice on quality control of the dredge reclamation area for completeness of removal of soft layers.
